Work Experience

Full Stack Engineer · Human Quotient Pvt. Ltd. — Qoneqt · Dec 2025 – Present · Thane, India

- Built the full analytics system for Qoneqt social media platform — wrote the Go backend (API handlers, RabbitMQ publisher, batch consumer) and built the browser-side analytics tracking library in React.
- Built an internal analytics dashboard for monitoring platform health — real-time event tracking, error logs, page view counts, and active viewer metrics.
- Configured ClickHouse on bare-metal with Cloudflare R2 as remote object storage (NVMe SSD cache layer) and Cloudflare CDN for media delivery.
- Implemented reel and image upload feature with pre-signed Cloudflare R2 URLs and multi-quality processing.
- Migrated entire Qoneqt frontend from Next.js to React.js — rebuilt routing, eliminated dead code, introduced reusable component architecture using Redux, React Query, and TanStack Router; completed in 3 months.
- Built the backend for Qoneqt's daily puzzle/games feature — leaderboard, daily rankings, level scheduling, challenge system, challenge notifications, and challenge distribution.

Backend Developer Intern · Nipralo Technologies · Oct 2025 – Nov 2025 · Ghatkopar, Mumbai

- Worked across Retreat, Blume, Pest Control, and Lead CRM — built and shipped features including Razorpay payment integration (buy, sell, cart) for Retreat and multiple admin dashboards for Blume.
- Designed database schemas and built RESTful APIs for Lead CRM and Pest Control using Node.js, Express, MongoDB, and MySQL.
- Developed frontend modules for Blume and Lead CRM using React and React Query; integrated backend APIs with Axios interceptors.

Projects

Distributed Rate Limiter · Jul 2026 – Aug 2026 · github.com/saravana-devx/Distributed-rate-limiter

- Production-grade rate limiting sidecar in Go — three algorithms (fixed window, sliding window log, token bucket) as atomic Redis Lua scripts, eliminating race conditions under concurrent load.
- Cache-aside pattern keeps the hot-path to two Redis calls with no DB query on cached requests. API key auth middleware, Prometheus metrics (counter + histogram), and Retry-After header on 429 responses.
- Stack: Go, Gin, Redis (Lua), PostgreSQL, GORM, Docker Compose, Prometheus.

JobFlow — Distributed Job Scheduler · May 2026 – Jun 2026 · github.com/saravana-devx/Jobflow

- Complete job scheduling service in Go — RabbitMQ broker, worker pool, priority queuing, per-job retry limits, and dead-letter queue for failed jobs.
- JobReconciler cron republishes jobs whose DB write committed but RabbitMQ publish failed, closing the dual-write reliability gap without manual intervention.
- Real-time job status updates via SSE — workers publish to Redis pub/sub; SSE manager fans out to connected clients. JWT auth with JTI store for token revocation.
- Stack: Go, Gin, PostgreSQL, RabbitMQ, Redis, Docker Compose.

Technical Skills

Languages: Go, JavaScript, TypeScript, C++

Backend: Gin, Node.js, Express.js, GraphQL, REST APIs, WebSocket, SSE

Frontend: React.js, Next.js, Redux, TanStack Router, React Query, Tailwind CSS

Databases: PostgreSQL, ClickHouse, MySQL, MongoDB, Redis, Supabase

Infra / Cloud: Docker, RabbitMQ, Kafka, Cloudflare R2 + CDN, AWS (S3, EC2), Prometheus, Linux

Tools: Git, GitHub, GORM, Postman, DBBeaver

Education

B.Sc. Computer Science — 8.42 / 10 · Smt. Chandibai Himathmal Mansukhani College, Ulhasnagar · Aug 2022 – May 2025
